Where disaster impacts are more disruptive

Map 21. Global map of socio-economic resilience (asset losses divided by wellbeing losses)

EW4ALL in a nutshell

Less than 50% countries in African reported to have multi-hazard early warning systems

Status of National Drought Monitors

The Gap

- Only 5 out of 55 Member States have national drought monitoring systems ([IDMP, June 2025 publication](#))
- Critical drought monitoring gap at national level

90%

Gap in the continent

EW4ALL roll-out

Capacity Assessment

2

Mozambique

Maturity level

This page presents detailed information on the capacity for monitoring and forecasting of the 30 countries initially selected for support under the EW4All Initiative, structured along eight elements of the hydrometeorological value chain, based on data submitted to WMO by their National Meteorological and Hydrological Services.

Element Maturity Scores

Country (M) / Global average* (D)

*Based on the number of currently assessed National Meteorological and Hydrological Services

Data View

Use the buttons below to switch between viewing the data on the priority hazards and the detailed data making up the overall element scores.

Priority Hazards

All data - by element

Tropical cyclone

Riverine Floods

Drought/ Dry spell

Thunderstorms/ Squall lines

Flash-floods

The Global Observatory for Early Warning System Investments is designed to share information about funding from Multi-lateral Development Banks and Funds currently being implemented and in the pipeline in support of early warning systems (EWS) to enable building coherence, alignment, increased leveraging of EWS funding and understanding of funding gaps. The Observatory supports the UN Secretary-General's Early Warnings for all Initiative. For more information about the initiative see: <https://earlywarningsforall.org>

Closing the gap between risk measurement and action

Increasing access to quality probabilistic risk and resilience information as a prerequisite for effective public and private decision making.

Findings & Framework Recommendations

- ⑩ **Harmonization as Guidance:** focus on a guiding framework of principles and methodologies for trigger **USERS' TAILORED** development, and provide results of quantitative analysis of performance of various indicators
- ⑩ **The Critical Role of Stakeholder Engagement and Co-production:** with all stakeholders, including national governments, regional bodies, UN agencies, NGOs, and local communities.
- ⑩ **Balancing Science with Contextual Realities:** vulnerability assessments and political/resource considerations can modulate purely scientific triggers.
- ⑩ **Data Quality and Accessibility as a Limiting Factor:** Need for improved impact data collection, sharing policies, development of structured databases

Scale up to the Global Level

Global Multi-Stakeholders Forum

Approach presented, discussed, and endorsed at the first Global Multi Stakeholders Forum of the EW4All initiative, within the GPDRR 2025

Two key networks

47+ Members of the Network of Centers of Excellence for DRR (NoE)
including:

Management committee members in addition to UNDRR

ARISE: Private Sector Networks

Private Sector

Kenya Risk Metrics

Locating national risk hotspots

AAL maps for floods

Source 21

Quantifying national risk

Distribution of AAL by hazard typology across the country. All values are shown in US\$ million

Considering your top two hazards, what are your most exposed sectors?

AAL - Floods, current climate

AAL - Earthquakes (built-up)

Practical Applications for Emergency Managementand Beyond

Strengthening the **understanding of (differentiated) impacts of climate change and disasters**. Building, informing, and calibrating vulnerability and risk models

Financing: Assessing losses and damages, DRR and adaptation financing

Risk-informing planning: development and sectoral planning (e.g. Infrastructure, agriculture, etc.)

Better (inclusive, gender-responsive, effective) **disaster risk reduction & climate financing**

Informing early warning systems (impact-based forecasting), anticipatory action, identification, preparedness for response and contingency planning. Measuring effectiveness

Informing resilient recovery - post-disaster needs assessments

Benchmarking success (or failure) of resilience building measures: monitoring progress, assessing effectiveness (Disaster risk reduction, adaptation, L&D)

Thank you
